Top News App

By Mahmoud Aljarrash

Top News App is a mobile application that can be used by everybody to stay up-to-date on daily news and headlines. The end user will be able to choose a new source from some predefined sources and the app will fetch and list the latest headlines from an API. Also, the users will get the details of a specific headline by clicking on that headline.

There are a lot of similar apps in the store but I'm just interested in building an app that retrieves data from an external source. I'll be using https://newsapi.org/ as the data source.
